

Conveying Structure

Maneesh Agrawala

CS 294-10: Visualization
Spring 2010

Final project

Design new visualization method

- Pose problem, Implement creative solution

Deliverables

- Implementation of solution
- 8-12 page paper in format of conference paper submission
- 2 design discussion presentations

Schedule

- Project proposal: 3/29
- Initial problem presentation: 3/31 (Wed)
- Midpoint design discussion: TBD
- Final paper and presentation: TBD

Grading

- Groups of up to 3 people, graded individually
- Clearly report responsibilities of each member

Initial Presentations

David Zats and Sushrut

Jon Barron

Zev

Tim Wheeler

Wed: Ryan Greenberg

Wed: Jeff, Akshay and Boaz

Priyanka and Lita

Wed: Shimul, Kerstin and Prahalika

Wed: Jonathan and Aaron

Wed: Steven Chu

Jaeyoung

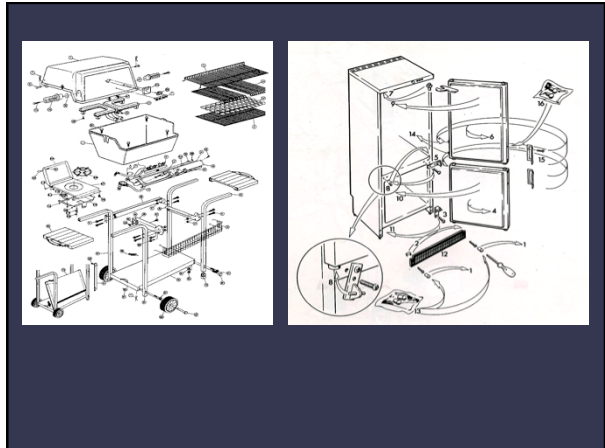

Wed: Jiamin

Arpad

Ebby

Wed: Paul Oppenheim

Assembly Instructions

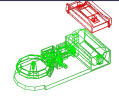

Previous Work

Planning

- Choose sequence of assembly operations
- Robotics / AI / Mechanical Engineering

[Wolter 89], [de Mello 91], [Wilson 92], [Romney 95]

Presentation

- Visually convey assembly operations
- Visualization / Computer Graphics

[Seligmann 91], [Rist 94], [Butz 97], [Strothotte 98]

Jointly optimize plan and presentation

Geometric Analysis [Romney 95]

Input Parts

Blocking Graph

Geometric Assembly Planning

The diagram illustrates the assembly of a 3D structure from colored blocks (red, green, blue, brown, pink). A central tree diagram shows the assembly sequence starting from a base of three blocks. Three paths are shown: the first two are labeled 'Valid' and the third is labeled 'Invalid'.

Many Geometrically Valid Sequences

A grid of 15 different assembly sequences for the same 3D structure, each labeled 'Valid'. The sequences are shown as a series of steps from a flat base to the final structure.

How do we choose the best sequence?

Identifying Design Principles

Stage 1: Production
 Stage 2: Preference
 Stage 3: Comprehension

Spatial Ability Tests

Mental Rotation [Vandenberg 78]
 Navigation [Money 78]

Answers: (1) First and second drawings are correct
 (2) First and third drawings are correct
 (3) Second and third drawings are correct

Separate high and low spatial ability

Stage 1: Production

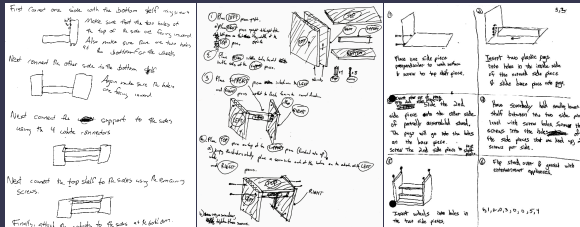

- 43 Participants
- Assemble TV Stand without instructions
- Write instructions for novice assembler

Stage 1: Mean completion time

Stage 1: Instructions produced

- Almost all contained diagrams **98%**
- Text redundant with diagrams **62%**

Stage 1: Errors in instructions

- Errors in low spatial instructions **86%**
- Errors in high spatial instructions **12%**

Stage 1: Errors in instructions

- Errors in low spatial instructions 86%
- Errors in high spatial instructions 12%

Stage 1: Classes of Diagrams

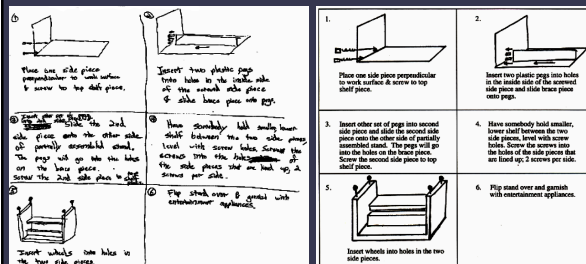

- Parts menu to differentiate parts
- Structural diagrams depict completed step
- Action diagrams show assembly action/operation

Stage 1: Action diagrams

- High spatial
 - More action diagrams
 - More 3D diagrams
 - Less text

Stage 2: Preference

- 21 Participants
- Assemble TV Stand without instructions
- Rated 39 sets of redrawn instructions

Stage 2: Highest Rated

- Ratings similar across all participants
- Spatial ability does not affect preference

Stage 3: Comprehension

Set 1: Text + Action

Set 3: Parts menu + Structural + Action

- 44 Participants
- Given 1 of 4 instruction sets from Stage 2
- Assemble TV stand using instructions

Stage 3: Results

- No difference in assembly time by condition
- Instruction consultations: Low 8.9 High 7.1
- Box picture consultations: Low 9.1 High 3.4

Comments

- Should show relevant parts and attachments
- Structural diagrams and exploded view hard to use
- Text not very useful

Design Principles

- Step-by-Step
- Action diagrams
- Good visibility

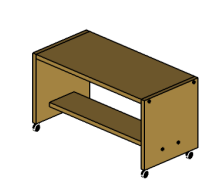

TV stand instructions generated by our system

Input

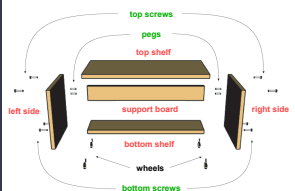

Geometry: Parts in assembled configuration required

Orientations: Default viewpoint / orientation optional

Groupings: Fasteners, significant parts, similar actions, symmetry

Assembled geometry in default orientation

Parts grouped as accessories and significant parts

Find best assembly sequence

- Planning: Geometric feasibility
- Presentation: Visibility

All parts

Search

Subdivide Steps

Reorientation

Step-by-step assembly sequence

Invalid

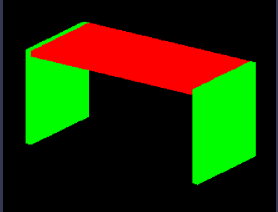

Valid

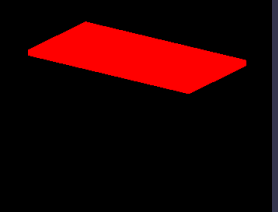

Valid

Computing Visibility

Area(P,Q) = # red pixels
Area of top *not* occluded by sides

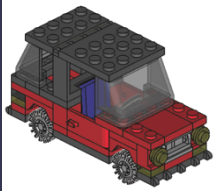

Area(P) = # red pixels
Area of top alone

Vis(P,Q) = Area(P,Q) / Area(P)
% pixels that remain visible when sides are included

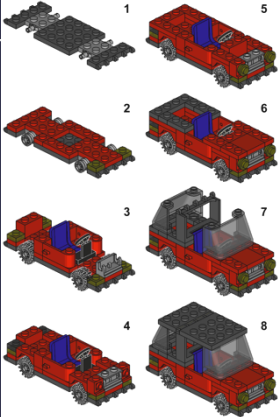

Visibility Constraints

- Parts being attached R**
 - Check that each part is visible
$$\min_{r \in R} (\text{Vis}(r, R-r)) * W_R$$
- Previously attached parts A**
 - Check that context is visible
$$\text{Vis}(A, R) * W_A$$
- Future unattached parts U**
 - Check that future parts will be visible
$$\min_{u \in U} (\text{Vis}(u, R)) * W_U$$

Lego Car

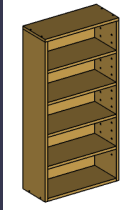

Input model

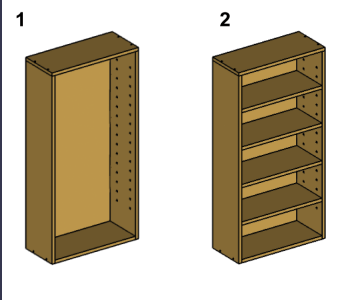

1. Base plate and wheels
2. Chassis assembly
3. Motor and gear assembly
4. Front suspension
5. Rear suspension
6. Side panels
7. Cabin assembly
8. Final assembly

Bookcase

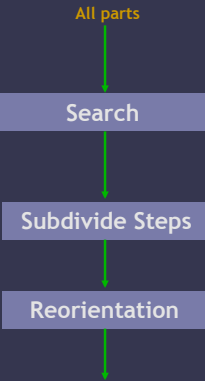

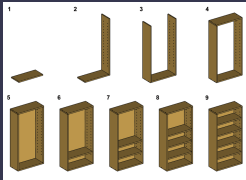

Input model

1. Side panel and back panel assembly
2. Final assembly with shelves

All parts

Search

Subdivide Steps

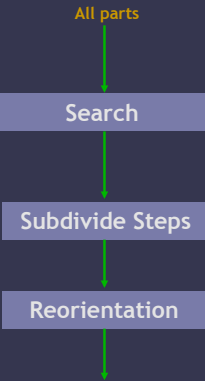

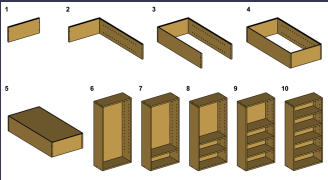

Reorientation

Step-by-step assembly sequence

Sequentially add parts

- Least visible to most visible
- Distance to viewer

All parts

Search

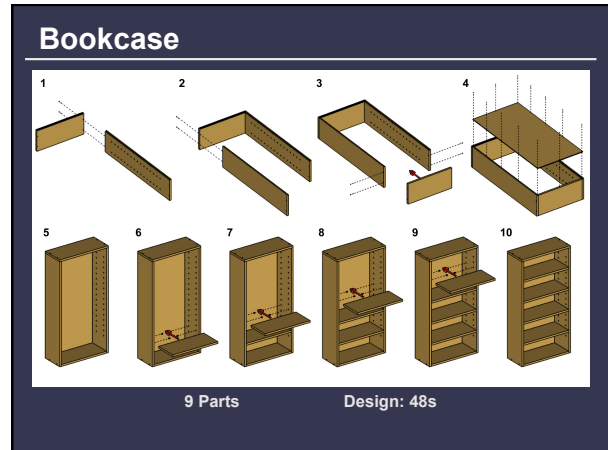

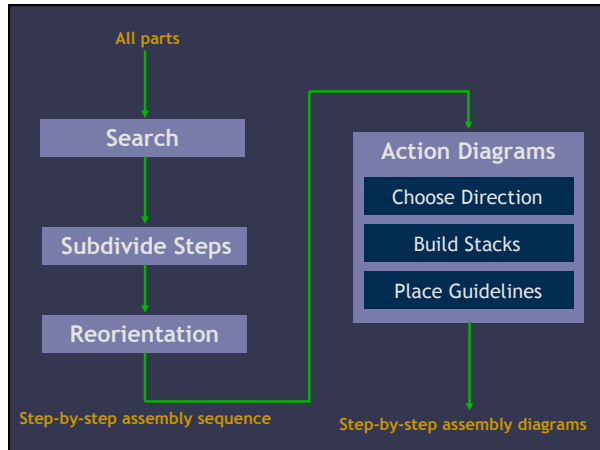

Subdivide Steps

Reorientation

Step-by-step assembly sequence

Reorient

- Set preferred orientation
- If poor visibility try alternate orientations

Evaluation

- 30 Participants
- Given 1 of 3 instruction sets: factory, hand-drawn, computer
- Assemble TV stand using instructions

Factory

Hand-drawn

Computer Generated

Results

Errors: Factory 1.6 Hand-drawn 0.6 Computer 0.5
 Task rated easiest in computer condition

Summary

Identification of design principles

- Production
- Preference
- Comprehension

Instantiation of design principles

Validation of design principles

Conveying Structure

Complex 3D objects

- Architectural models
- Mechanical assemblies
- Biological specimens
- ...

Photographs and illustrations

Reveal external shape, do not expose internal structure

Problem: Occlusion

Can't see beyond frontmost surface

- Fundamental property / limitation of vision

Exterior surfaces hide internal structure

- Normally we exploit this in computer graphics

Exploded views, cutaways, ghosting...

How it's built / How it works / What it does

Topics

Framework for conveying structure
Choosing good views
Layering
Cutaways and sections
Exploded views

Framework

Framework for conveying structure

Goal: Expose important internal features

Requirements

- Internal features
- Viewpoint
- Blockers

Procedure

- Transform blockers so internal features visible

Internal Features

■ Which internal features should be visible?

■ Presentation

- Features support story

■ Exploration

- Show all internal parts
- All of the important features may not be known *a priori*

Lincoln's assassination at Ford's theater [Lorenz 88]

Viewpoint

Where is observer looking from?

Blockers

Blockers are the objects or surfaces that occlude internal features from the viewpoint

Blocker transformation

Choose transformations that de-emphasizes blockers and emphasizes internal features?

- Cull
- Move
- Transparency
- Modify drawing style
- Rotate object (or transform viewpoint)

Visualization should clearly indicate transformation

Choosing Good Views

Generic vs. accidental views

Generic: A view of an object that does not change drastically under small changes in viewpoint

Accidental: A special view of an object for which small perturbations in viewpoint drastically change appearance

Accidental view

Alignment of trash and sea

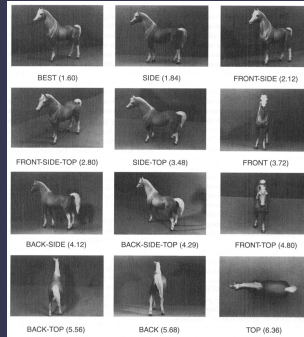

[Turner]

Generic vs. accidental view

Which view is best? [Palmer, Rosch, Chase 81]

Rate views

Canonical view [Palmer, Rosch, Chase 81]

Features must be salient

Generic view

Oblique view

- Frontal view from above
- 3/4 up view

Canonical Views [Blanz, Tarr Bulthoff 99]

What is a good view?

Canonical views

- Oblique views from above
- Avoid accidental views

In our case – to reveal internal structure

- Separation of internal features in image plane

Viewpoint transformations

Street level view

Overhead view

Sometimes a good viewpoint will expose features

- Street view does not show overall city plan
- Overhead view exposes more of the city plan

Layering

Transparency

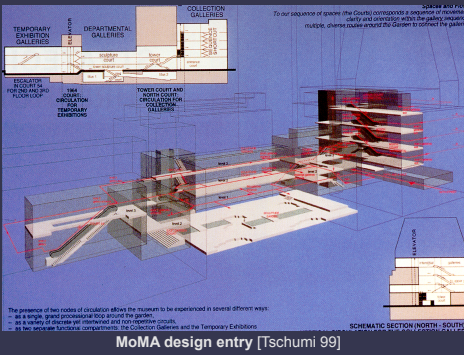

Blocker completely transparent

Blocker semi-transparent

Location of battery in army radio [Feiner & Seligmann 92]

Transparency

Ghosting

Draw blockers as wireframes

Dotted lines

Leonardo Da Vinci circa 1490

Interrante – Siggraph 97

Blocker surface indicated via thin lines in direction of principal curvature

Cutaways and Sections

Cutaways

Blockers partially visible

Edges

- Raggedness emphasizes cut
- Contrast also adds emphasis
- Shape focuses attention
- Spatializes internal stuff

Manually operated reciprocating water pump [Agricola 1556]

Cutaways: Example

Midget submarine [from Holmes 93]

Cutaways: Example

Hubble repair [from Holmes 93]

Sections

Split along cutting surface

- Usually planar cut
- May not cut all objects in plane

Orientation

- Principal planes
- Symmetry planes
- Structural elements

Convey shape

- Shape of cutting surface
- Auxiliary view showing cut location
- Shape & material of cut volume
- Orthogonal view allows measurement

Skulls [Da Vinci ca 1490]

Architecture

Engine in a large building [Boulton & Watt]

Technical illustration

Two sections of engine

Showing cut location

[French & Vierck 60]

Shape of cutting surface

[French & Vierck 60]

Shape of cutting surface

Physical cutaway [CalCo www.calcocutaways.com]

Shape of blocking surface

Control room of Midget Submarine
[from Holmes 93]

Material of cut volume

Ear canal [from Mijksenaar 99]

Material of cut vol.

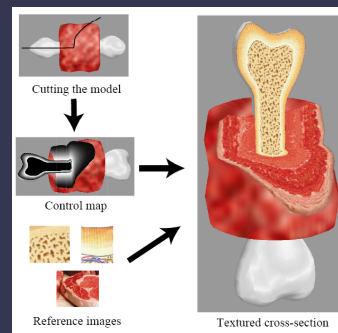

FIG. 22.5. A conventional drawing. Because of the drafting effort required to produce the detail and embellishment, this drawing is expensive.

[French and Vierck 60]

Extracting sulphur from deposits [from Herdeg 81]

Synthesizing cut material

Volumetric illustration [Owada 04]

Exploded Views

Exploded views

Goal: Show overall structure

Direction

- Principal axes
- Sometimes zigzag to reduce occlusions

Distance

- Reduce / eliminate occlusions

Axonomic projection

- Reduces distortion

Guidelines

- When?
- Where ?

Train [from Mijksenaar 99]

Principal Axes

Pivot hanger [French & Vierck 60]

Manual steering gear [from Ferguson 92]

Leonardo Da Vinci

Ratchet device

Radial exploded views

3D Distortion Viewing [Carpendale 97]

3D Explosion Probe [Sonnet 04]

Zigzag layout

Camping Stove [from Mijksenaar 99]

Occlusion and guidelines

IBM Series III Copies/Duplicator Adjustment Parts Manual [Graham 76]

Cutaways, sections, exploded view

Strange immersion of torus in 3-space
[Curtis 92]

Sections and exploded view

An exploded view diagram of a building with six levels, numbered 1 to 6. Each level is shown as a separate, offset floor plan. A legend at the bottom left identifies different areas: 1. Lobby, 2. Reception, 3. Conference, 4. Office, 5. Office, 6. Office. A small human figure is shown at the bottom right for scale.

IBM building plan [from Holmes 93]

Exploded view

An exploded view diagram of a museum guide. It shows two main buildings: 'West Building' and 'East Building'. The levels are labeled: 'Upper Level', 'Mezzanine', 'Ground Level', 'Main Floor', and 'Underground Concourse Level'. A red line with a person icon indicates a path through the building, with a red box labeled 'you are here' on the Main Floor. A small photograph of a museum interior is shown in the top left corner.

Concept design for museum guide [Tuft 97]

Understanding 3D maps

Three types of 3D maps are shown:

- Floorplans:** A top-down view of a building's layout.
- Axonometric View:** A 3D perspective view of a building's structure, showing its height and depth.
- Floorplans + Front View:** A combination of a floor plan and a front elevation view.

Locating landmarks fastest with axonometric view [Fontaine 01]

Generating an exploded view

Soda Hall model from Funkhouser, Séquin, Teller

1. Geometric analysis - Find downward facing *ceiling* polygons
2. Place sectioning planes below ceilings
3. Multi-pass render each story separately

Works with existing 3D applications

Quake III Arena by Id Software

Intercept and modify OpenGL stream

- Non-invasive [Mohr 01]
- Apply to existing OpenGL application without modification

Future: Enhanced spectator mode

Real-world buildings

Stacking

Fragmentation and depth assignment

Annotation

Interactive viewing
